---

PROFESSIONAL SUMMARY

Software Development Engineer in Test (SDET) with 2+ years of experience in automation testing and AI-driven application validation. Specialized in evaluating Large Language Model (LLM) outputs using automated evaluation frameworks such as DeepEval and G-Eval, and building scalable GenAI response evaluation pipelines. Experienced in validating AI-generated clinical summaries against structured healthcare datasets to ensure accuracy and completeness. Skilled in Selenium automation, BLE protocol testing, API validation, and end-to-end testing of distributed systems, with a proven ability to reduce manual QA effort by **80%** through automation and data-driven validation strategies.

TECHNICAL SKILLS

Automation & Test Frameworks	Selenium WebDriver, Cypress, TestNG, Page Object Model (POM), UI Automation, Regression Automation, Functional Testing, End-to-End Testing
AI / GenAI Testing	DeepEval, G-Eval, Prompt Testing, LLM Output Evaluation, Hallucination Detection, Response Quality Evaluation, AI Output Validation
Programming	Java, Python, SQL
API & Backend Testing	FastAPI, REST API Testing, JSON Validation, PostgreSQL
Tools & Platforms	Git, GitHub, JIRA (Zephyr), ClickUp

PROFESSIONAL EXPERIENCE

Software Test Engineer – Automation & AI Systems
Exathought (IQVIA – AIM Platform) Dec 2025 – Present

• Designed and implemented a comprehensive testing strategy for an AI-driven data analytics platform responsible for generating insights from enterprise datasets.
• Validated AI-generated analytical outputs by comparing structured model responses with underlying datasets to ensure accuracy and reliability.
• Developed structured test suites covering functional validation, regression testing, edge cases, and large dataset processing scenarios.
• Conducted data validation testing to ensure AI model outputs aligned with upstream data pipelines.
• Worked closely with developers and data engineers to validate model pipelines and improve the reliability of AI-driven analytics workflows.

Software Test Engineer – AI Clinical Systems
Exathought (Management Foresight) Apr 2025 – Nov 2025

• Implemented AI-focused testing strategies for validating clinical summary generation systems used in healthcare analytics.
• Evaluated AI-generated medical summaries against raw clinical records to ensure factual correctness and completeness.
• Built automated evaluation workflows using DeepEval to measure summary accuracy, contextual alignment, and coverage.

• Designed validation datasets containing complex healthcare documentation scenarios and edge cases.
• Performed extensive validation of model outputs against healthcare documentation and regulatory standards.
• Collaborated with engineering and data science teams to improve AI model reliability and output quality.

Software Test Engineer – GenAI Applications
Exathought – (ExaGenAI Platform) Mar 2024 – Apr 2025

• Built automated evaluation pipelines to test and validate GenAI responses using DeepEval and G-Eval frameworks.
• Designed custom evaluation metrics to benchmark LLM responses for quality, safety, and factual correctness.
• Implemented end-to-end automation workflows for AI response validation, reducing manual QA effort by 80%.
• Integrated LLM evaluation pipelines with locally hosted model APIs and PostgreSQL databases for automated monitoring.
• Executed functional, UI, and performance testing across AI-driven product features.
• Identified and documented 100+ defects across UI, functional, and performance layers, improving product stability.

PROJECTS

Agentic AI Testing Project (Test Tribe Certification Program)

• Built and tested an Agentic AI workflow capable of performing multi-step reasoning and autonomous task execution.
• Designed test scenarios validating agent planning logic, tool usage, and memory management across multi-turn interactions.
• Implemented evaluation strategies to detect hallucinations, reasoning failures, and incorrect tool usage.
• Performed prompt testing and safety validation to ensure reliable decision-making by autonomous AI agents.
• Documented testing methodologies for evaluating agent-based AI systems operating in dynamic environments.

Bluetooth Low Energy (BLE) Automation Testing

• Designed a comprehensive BLE testing strategy for smart bike connectivity systems.
• Validated Bluetooth discovery, pairing, bonding, and reconnection workflows using BlueZ.
• Automated BLE service and characteristic testing using the Python Bleak framework.
• Verified telemetry data such as speed, cadence, resistance, and distance for accuracy and latency (<200ms).
• Built reusable automation scripts to simulate BLE communication scenarios.
• Reduced manual BLE validation effort by 40% through automation.

EDUCATION

Bachelor of Engineering (Electrical & Electronics Engineering)
KLE Technological University – 2022

CERTIFICATIONS

Agentic AI Testing Certification – Test Tribe

Software Automation Testing – QSpiders, Bangalore
